

MobileConsent™

Aptia Systems has developed MobileConsent™, a Tablet PC application that dramatically improves the Informed Consent process with potential research subjects making their participation more likely and the process less intimidating.

PRODUCT DETAILS

Through a clipboard-sized computerized tablet, researchers are liberated from the burden of proper and thorough communication of studies while subjects are more thoroughly informed through engaging video, sounds, texts and interactive forms, all with the added privacy of a Bluetooth headset. MobileConsent™ ensures that the message is delivered consistently, effectively and in accordance with critical regulations. Subjects and researchers alike benefit from the interactive and enhanced communication features that simplify the way patients are informed of study procedures, requirements and hopeful outcomes.

KEY FEATURES

- Interactive, full color display.
- Engaging video, sound and text.
- Multi-lingual capabilities.
- Bluetooth headset privacy.
- Lightweight, compact design.
- Secure with password and barcode features.
- Easy to clean and disinfect.
- Up to 6 hours battery life.
- Wireless connectivity.
- Optional accessories provide additional features and connectivity:
Docking Station, Battery Charger, Mobile Dock and EasyConnect
- Natural pen/speech input
- New bright AFFS+ LED Backlight Display Technology
- Optional View Anywhere® display for optimal viewing in all lighting conditions
- Healthcare-oriented security features and optional smart card reader

KEY ADVANTAGES

- Subjects are empowered with knowledge.
- Participation is increased through increased understanding.
- Communication is uninhibited via a Bluetooth headset and appropriate language selections.
- Correct information is assured by Barcode scanning of subject's wristband.
- Hassle-free forms management with real time documentation improves organization.
- Interactive subject participation screens ensure that electronic signatures have been recorded appropriately.
- Wireless print capabilities make it easy to supply subjects with electronically signed documents.
- Compliance is assured and medical malpractice risk is reduced.
